### Data Council members

## Objectives

- Map the gaps and holes in availability of raw ESG data required by financial market participants to comply with regulatory sustainability requirements emerging across multiple jurisdictions.
- Identify rationale for these gaps.
- Share best practices and proposed approach to fill these gaps.
- Feed the FoSDA partners and Data Council with our findings to support engagement with policy maker

## Deliverables

- Establish a working group – an internal Data Council working group comprised of at least one delegate per member organization to conduct detailed research into key ESG data gaps and holes. Delegated to bring their own research and views to kick-start mapping.
- Compile introductory letters – Letters to be distributed to relevant policymaking institutions informing them of the Data Council's focus and interest in cooperation and dialogue.

## Timeline
